Poseidon™ Hydrophilic Nitinol Guide Wire Now class III – for Cardiology use

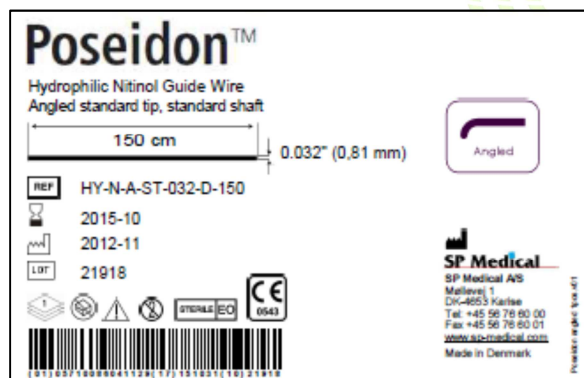

We are pleased to inform you that our Poseidon™ Hydrophilic Nitinol Guide Wire programme is now approved as a class III Guide Wire and can be used for Cardiology.

Our Poseidon™ Hydrophilic Nitinol Guide Wire is available in a wide range of configurations (length, diameter, tip shape, tip and shaft stiffness) enabling the physicians to choose just the right configuration for each clinical situation.

The class III products will be packed in a 5 pcs. box including a separate multilingual IFU on 22 languages.

The label of each single peel pouch has been simplified using symbol for easier identification and includes also an EAN13 barcode.

During a transition period our customers may continue to receive some product in class IIa unless it is clearly stated on the order that class III is required. This will be for a short period of time and is relative to products already manufactured and in storage prior to our change date.
